

West Nile virus, lineage 1

#1 olp feature does not overlap with same set of features as in reference [-(1.1,2.1)]

#2 olp feature does not overlap with same set of features as in reference [-(2.1,1.1)]

#2 trc in-frame stop codon exists 5' of stop position predicted by homology to reference [homology search predicted 228..1 revised to 228..175 (stop shifted 174 nt)]

CDS str predicted CDS start position is not beginning of ATG start codon [ATT starting at position 51 on strand +]

[illegible]

Code searches for homology in forward and reverse directions, and found that JX503096 has a reverse-complement section
