

Overview of annotation pipeline for Dengue Virus

INPUT:

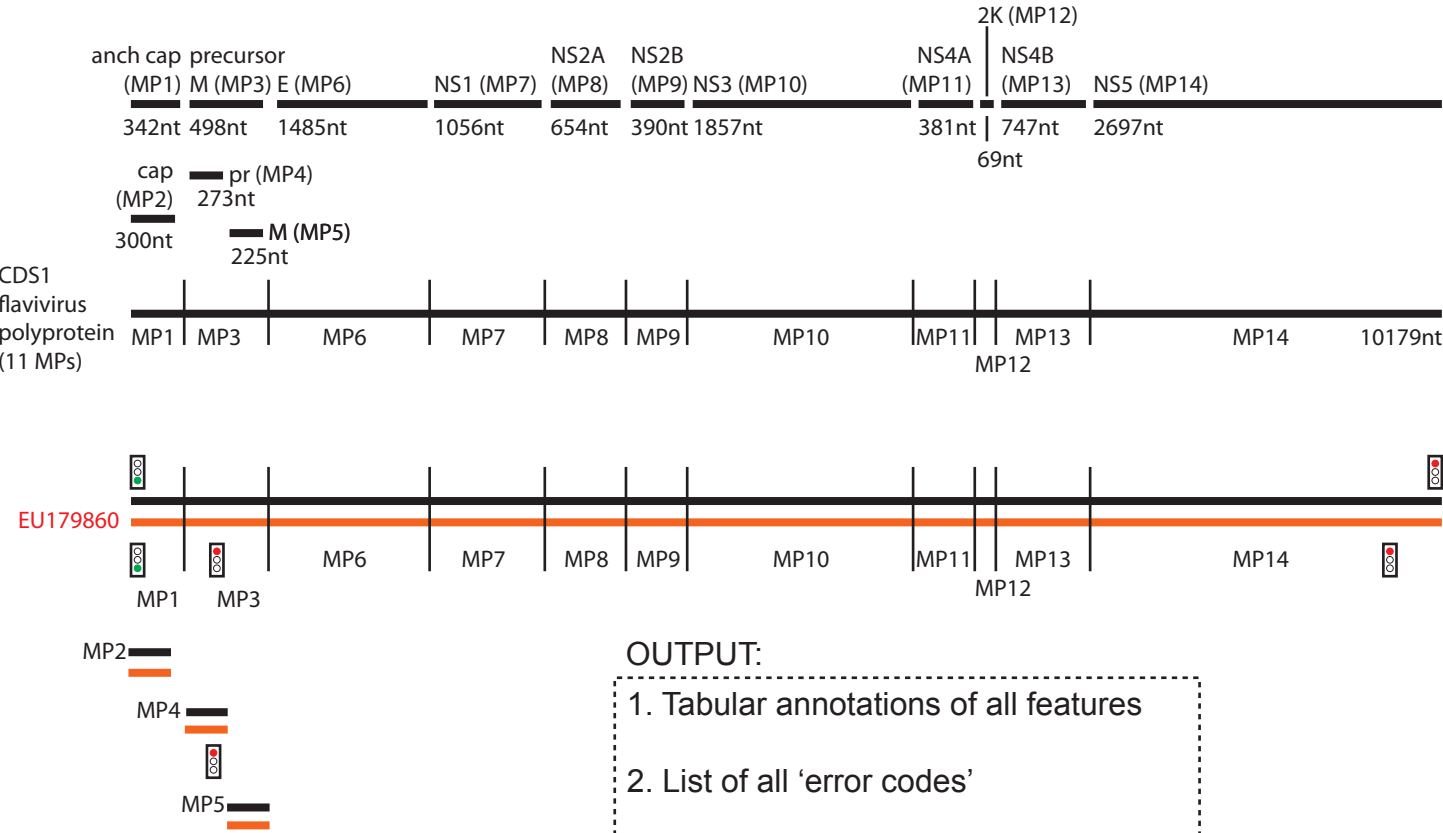

1. RefSeq annotation (NC_001477)

2. Target sequence(s) to annotate:

Combine models into 'features' (14 MPs and 1 CDS), translate, find stop codons, and identify errors:

OUTPUT:

1. Tabular annotations of all features
2. List of all 'error codes'
3. Nucleotide and protein multiple alignments (optional)
